

SUPERIOR QUALITY COPPER TUBE FOR MEDICAL USE

CTA offers a complete solution for all your medical and health copper installations

Modern medical equipment carries with it the absolute strictest requirements so as not to jeopardize the health and safety of patients and medical practitioners. Copper and its alloys offer outstanding benefits for this industry, the primary of which include its biostatic and non-permeable properties. Beyond these benefits, liquids and fuels cannot penetrate copper tube walls and slime build up doesn't occur.

It has been proven that copper is able to kill off harmful bacteria. In fact, laboratory tests have demonstrated that copper is effective against a number of disease-causing bacteria. 99% of MRSA, the hospital acquired "superbug", is killed within minutes of being exposed to copper. CTA's Copper Tubes for Medical Gas and Vacuum Services are fully accredited and conform to the specifications, BSI EN13348:2016 / ASTM 819:2000 / SANS 1453:2018 and other international specifications We manufacture these tubes in various sizes ranging from 5/16" to 2". In the half hard condition, we manufacture tube sizes from 5/16" to 7/8" and 1" to 2" in the hard condition.

Before being released for use in the medical industry, all the tubes we manufacture are thoroughly cleaned using a chemical process. Thereafter, we use a mechanical method to ensure that all impurities and carbon film layers are removed, making it safe for medical usage.

ASTM 819:2000 Half Hard and Hard Drawn Condition
